Recent Developments in Renewable Biomass for Sustainable Energy: Current Status and Future Prospects

Message from the Guest Editors

Today, with rapid economic development and the continuous growth of the world population, energy consumption is sharply increasing. However, fossil fuel resources still dominate the energy market, accounting for 87% of global energy consumption. In response to the climate crisis and environmental pollution, many countries have revised their energy schemes, in which process renewable energy plays an important role. Among the different forms of renewable energy, biomass has been considered a crucial resource that can provide a variety of energy needs, including generating electricity, fuelling vehicles, and providing heat. The main advantage of biomass, as the only renewable carbon source, over all other renewable resources, is the possibility to be converted into solid, liquid, and gaseous fuels through different conversion routes. This Special Issue aims to publish recent advances in the basic research and technological development of renewable energy through the high-value utilization of different biomass feedstock, mainly focusing on biowaste. About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
