

Special Issue

Role of Impact Assessment in Sustainable Development

Message from the Guest Editors

The issue of sustainable development is determined not only by the effective use of resources and the application of appropriate strategies, but also by considering the social aspect as well. Thus, impact assessment has been established in companies with taking into consideration multiple criteria of different nature (economic, environmental, and social), as well as the transparency and engagement of the different stakeholders, such as organizations, government, and communities. Social impact assessment (SIA) is a means of resilience in responding to change, to the needs of external stakeholders seeking to replace the contribution of public authorities, and therefore identifying opportunities that enhance benefits for local communities. This Special Issue aims to discuss the role of environmental and social impact assessment in companies in spheres such as profit and non-profit realities as a pathway for sustainable development as well as the role of hybrid organizations in the context of development and change.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
