

Special Issue

Sustainable Security Management and Analysis of Engineering and Information by Data-Driven

Message from the Guest Editors

The rapid development of engineering and technology is finally bringing about the data explosion that people have been dreaming of for decades. There is no doubt that how to sustainably manage and analyze the information obtained for these areas and how to continually instruct the engineering development is an important question for the modern world. This Special Issue calls for papers that employ the data-driven method to enrich the knowledge of engineering and information. Topics of interest for this Special Issue include:

- Security management from a sustainability perspective;
- Big data in engineering;
- Social media analysis by a data-driven approach;
- Sustainable analysis of engineering;
- Simulation interpretation;
- Stability analysis of engineering;
- Numerical modeling in engineering and information;
- Information interpretation;
- Sudden pandemic on data evolution;
- Impact of COVID-19 on information;
- Data-driven methods on data sustainability;
- Artificial intelligence and machine learning in engineering;
- Data-driven techniques, innovations, and trends.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
