# Soil Health Restoration and Environmental Management

### Message from the Guest Editors

Climate change and soil health are two interrelated factors that affect the food, nutritional, environmental, and economic status of a country. However, most of the soils are less fertile and have low soil organic carbon (SOC) stock. It is important to formulate and implement policies for soil health restoration to strengthen agricultural soil systems. Redesigned policies should be focused on soil, environmental, and human health through soil health restoration. Through planning to manage the agroecosystem, it is possible to establish a link between soil and human wellbeing toward achieving sustainability. Now there is an urgency to take needful actions for the implementation of best management practices (BMPs) and different policies and planning for sustainable and eco-friendly agricultural systems to achieve advanced sustainability. This calls for better coordination among scientists, farmers, and land managers for designing efficient policy. It will help to generate a holistic approach for developing an action plan by taking advantage of available technical and scientific resources to restore the soil health of terrestrial ecosystems.

## **About the Journal**

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

#### **Author Benefits**

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
