

## Special Issue

# Sustainable Utilization of Metallurgical Resources and Solid Waste Resources

### Message from the Guest Editor

At present, the comprehensive utilization of metallurgical resources and solid waste resources produced by their utilization has attracted extensive attention from many scientific researchers. It is a frontier and hot field of scientific research. After the separation of metallurgical raw minerals, a large number of waste rocks are obtained, which leads to the waste of useful elements. Additionally, the associated environmental problems (e.g., waste gas, waste water) are serious. Thus, there are still problems in the current technology and core scientific problems of comprehensive utilization need to be solved, which is also the common concern of relevant researchers in the comprehensive utilization of resources. The scope and purpose of this Special Issue are the green utilization of metallurgical and solid waste resources, aiming to provide new theory for the use of metallurgical resources. The Issue is concerned with new green methods for the utilization of these useful resources—especially shielding analysis and the materials prepared from these resources. We welcome authors in the field to contribute to this Issue.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
