

## Special Issue

# Spatial Analysis and Real Estate Studies

### Message from the Guest Editors

Spatial Analysis and Real Estate Studies have numerous connections. Spatial dependence within the real estate markets is often studied using hedonic price regressions with the objective to quantify property value benefits of amenities such as access to public transport, parks, and water, but also negative impacts due to noise, pollution, and crime. This Special Issue aims to bring together work at the spatial analysis and real estate interface with conceptual and methodological contributions, case studies from around the world, and new insights to enhance the understanding of how spatial analysis can increase our understanding of real estate markets.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
