

Special Issue

Exploring Superabsorbent Material and Soil Water Retention on the Sustainable Environment Perspective

Message from the Guest Editors

Superabsorbent materials have ability to retain large amounts of water and their liquids. Over the years, many studies have confirmed the positive effect of superabsorbent materials on soil water content, crop production or at all on supporting vegetation. However, their biodegradability in soil may vary from months to years. The present Special Issue aims to discuss all aspects of the sustainable environment perspective of superabsorbent materials used as soil amendments. All aspects regarding innovative superabsorbent materials, biodegradability over time, role of soil microorganisms, soil load, soil porosity, permeability coefficient, modeling of superabsorbent materials on soil parameters, and crop production are welcome. Full articles, short communications, or review articles in topics related to superabsorbent materials and their impact on sustainable environment are expected. This Special Issue is a good opportunity for researchers from different areas to present their research and to contribute to the establishment of more detailed links between efficiency, advantages, and disadvantages of using superabsorbent materials as soil amendments.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
