Special Issue

Advances in the Supply Chain and Circular Economy towards Sustainability

Message from the Guest Editor

Over the past decades the exploration of circular economy in the context of operations and supply chain management has become an important research field. This special issue on recent advances in supply chain and circular economy towards sustainability, aims at highlighting multi-disciplinary approaches to demonstrate how to optimize the supply chain processes and empirically practice circular economy principles within organization. The scopes and levels can be broad from upstream and downstream supply chains and/or narrow one specific area, such as financial, sourcing, production, purchasing implications within organizations (e.g., both empirical based analysis and/or mathematical models are welcome). This special issue will explore the topic of circular economy practices and sustainable supply chain in manufacturing and/or service industries. However, the literature review of these relevant topics is also welcome.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
