Managing Supply Chain Uncertainty in the Post-COVID-19 Business Environment

Message from the Guest Editors

COVID-19 pandemic has caused many uncertainties and challenges in business supply chain operations. Besides, many governments have abandoned their 'Zero-COVID' strategy. Moreover, new variants of the coronavirus keep appearing, such as the Delta variant and the Omicron variant. For a long time in the future, everyone needs to adapt this 'new normal', and organizations must face and continuously deal with these COVID-19 uncertainties and challenges to enable a sustainability post COVID-19. Therefore, we would like to invite scholars to rethink about the ways to manage / mitigate the impacts of COVID-19 pandemic on supply chains in industry 4.0. Managing supply chain uncertainty may provide valuable insights into supply chain management in the post-COVID-19 business environment. The objective of this Special Issue is to investigate the role of relevant new technologies and / or mitigation strategies in facilitating and managing sustainable supply chain issues in organizations. We welcome both novel conceptual paper and empirical studies addressing sustainability issues in the post-COVID-19 business environment.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
