

## Special Issue

# Sustainable Buildings in Developing Countries

### Message from the Guest Editor

Many developing countries are being quickly involved in a massive urbanization process that is typical in post-war or post-crisis conditions. This means that the risk of establishing wrong practices, methods, and business models that will pave the way for the next 10–20 years is absolutely high and real. This would mean a significant lack in properly considering social and environmental needs while also limiting the development of local knowledge and skills in climate-responsive constructions. In such a context, the scope of the Special Issue is to collect research works focused on proper climate-responsive technologies, techniques, methodologies and business models specifically suited for the building sector in developing countries.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
