

Special Issue

Towards a Sustainable Life: Smart and Green Design in Buildings and Community

Message from the Guest Editors

This Special Issue is interested in how sustainable life can be achieved in terms of sustainable architecture and positive technology. Green design is often used interchangeably with environmental sustainability and is mainly considered for sustainable development. However, this Special Issue considers user-centered smart design for sustainable life because our living spaces are integrated with technologies to support people's activities, and such integration can support sustainable development. Positive technology could improve overall quality of life by promoting occupants' wellbeing and satisfaction. This Special Issue welcomes research contributions on sustainable life in buildings and communities. The aim is to highlight issues on the sustainable development of our environments and lives by emphasizing smart and green design perspectives.

- Environmental sustainability
- Sustainable development
- Sustainable architecture
- Sustainable life
- Smart and green design
- Positive technology
- Buildings and sustainability
- Community and sustainability

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
