Sustainability on Natural Resource Economics

Message from the Guest Editor

Managing natural resources in a responsible and rational way is one of the keys to sustainability and one of the greatest challenges that humanity faces. Natural resources provide essential inputs for human society such as food, energy, and water. However, a large part of these natural resources is threatened by their intensive and irrational use. The aim of this Special Issue is to gain a better understanding of the role of natural resources in the economy, analyze the impact that their current management will have on its future availability, and propose more sustainable methods to manage natural resources. In short, this Special Issue will focus on analyzing the interactions between economic and natural systems, with the aim of helping to develop a more sustainable and efficient economy.
