

## Special Issue

# Sustainable and Resilient Supply Chains

### Message from the Guest Editors

There has been growing societal and governmental pressure challenging businesses to focus more on the environmental issues. Supply chain professionals are becoming increasingly motivated in operating their supply chains in a sustainable manner. The latter is enhanced by the contemporary need to be both resilient and sustainable in their supply chains. In order to achieve the dual goals, we need to consider the following: rethinking supply chain efficiency, contemplating supply chain integration and partnerships, applying appropriate IT and digitalization tools, embracing supply chain learning and innovation, enhancing distribution strategies and online/omni-channel retailing, developing circular value systems, implementing transparency and visibility in supply chains as well as incorporating complexity, uncertainty, and risk in global supply chains. The purpose of this Special Issue is to offer appreciative and critical perspectives on the different ways in which a sustainability and resilience in logistics and supply chains can be achieved.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
