

Special Issue

Sustainable Urban Stormwater Management

Message from the Guest Editors

Urban growth and land use change cause land degradation and increasing susceptibility to water-related natural hazards. In the last several decades, large efforts have been made to improve urban drainage systems to mitigate the impacts of land degradation and to make cities and urban settlements sustainable in accordance with the UN 2030 Agenda for Sustainable Development. The limitations linked to the traditional urban drainage approach were pointed out, and new approaches are being developed introducing more natural methods for retaining and/or disposing of stormwater.

This Special Issue will provide an attempt to share knowledge among experts and researchers working on the main aspects related to urban drainage management.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
