Special Issue

Sustainability and Energy Transition

Message from the Guest Editors

Energy is a key input for human civilization, such that per capita energy consumption is grossly considered as an index of the living standard of a country. For several decades, fossil fuels (mostly, coal, oil and natural gas) have been the main source of this energy supply. However, about 60% of global fossil fuel reserves have been consumed over the last 200 years. With limited fossil fuels remaining and their fast depletion, substitution of these resources for energy supply in the near future is indispensable. This crisis is even more complicated due to the problem of climate change, the greatest threat to human survival. Global emission of CO2 from the combustion of fossil fuels is identified as the major cause of this problem. This Special Issue invites articles on the theme of energy transition and sustainability. Articles may include technology development, best practices, and socioeconomic issues including innovative policies to promote sustainability related to global energy transition. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
