Special Issue

Sustainable City Planning and Development: Transport and Land Use

Message from the Guest Editors

Developing sustainable cities, which entails consensus and collaboration, is encouraged by the United Nations' Sustainable Development Goals. A prerequisite for sustainable urban planning and development is the integration and coordinated development of transport (spatial interaction) and land use (spatial development). In recent years, the integration of transport and land use has entered the public discourse, and its significance has been greatly emphasized. An enriched understanding of the interaction between transport and land use is of theoretical and practical importance for achieving transport-land use integration and the Sustainable Development Goals. Therefore, this Special Issue focuses on the interaction between transport and land use for sustainable urban planning and development. This Special Issue offers a platform to share the latest accomplishments and research findings about the interaction between transport and land use, especially those with profound theoretical, methodological, and practical implications and those focusing on new theories, data, variables, models, sites, and implications.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon
