Special Issue

New Business and Operational Models for the Management of Green and Sustainable City Logistics

Message from the Guest Editors

Logistics is a key activity in urban areas, due to its key role in the economic growth of a city, but also to its externalities (e.g., traffic congestion, pollution, noise) affecting the quality of life of citizens. This Special Issue aims to focus on the new business and operational models emerging in planning and managing city logistics while considering the environmental, social and economic aspects related to the sustainability of the logistic system. Covered topics include (but are not limited to) green routing, green logistics, city logistics applications, smart mobility, environment 4.0, business models in urban logistics, synchromodal transportation, multimodal transportation.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
