Special Issue

Sustainable Energy Economics and Policies

Message from the Guest Editors

Various energy and environmental policies are being taken in several countries. Effectively evaluating the impacts of these energy and environmental policies on sustainable development is important not only in the academic world but also for the policymakers. The aim of this Special Issue is to create a collection of rigorous research articles that explore, examine, and make proposals of which conditions and mechanisms can push the energy and environmental policies to play in favor of green and sustainable development. We invite articles that address the important issues of energy and environmental policies and economics in all industries, regions and countries. The scope of this Special Issue includes, but is not limited to:

- Conceptualizing proper energy and environmental policies;
- Impacts of energy and environmental policies on sustainable development;
- Scenarios and pathways for sustainable development across industrial sectors, regions and countries;
- Methods and tools for energy and environmental policy evaluation (e.g., reduced form; structural form; machine learning).

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
