Sustainable Operations and Supply Chain Management: Evolution and Future Trends

Message from the Guest Editors

The recent COVID-19 epidemic have been starting a debate on the future trends of the globalized operations management in both manufacturing and service industries, emphasizing the need to realize a systematic shift toward more sustainable practices both from production and consumption patterns. Indeed, the Agenda 2030 proposes to develop more responsible production and consumption (Goal 12), emphasising the necessity to reduce waste and to be more effective and efficient in the usage of natural resources (energy water etc.). This Special Issue aims at publishing high-quality research papers on the inter-disciplinary field of Sustainable Operations Management, focusing on contributions related to evolution and future trends of Sustainable Operations and Supply Chain Management both in manufacturing (food, medical devices, pharmaceutical etc.) and service (healthcare, educations, transportations, tourism etc.) industries.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
