

Special Issue

Applications of System Engineering Approaches in Complex Project Management

Message from the Guest Editor

As the complexity of projects increase, systems thinking is needed to analyze how these projects should be managed. In this special issue, we would like to invite you to submit papers on applications of systems engineering approaches in complex project management. Various applications of models and methods to manage the complexity of projects are welcome including modelling and simulations tools based on discrete event simulation, systems dynamics and agent based modelling. It is expected that the papers will provide innovative ideas to project management academics and practitioners to implement systems approaches in complex projects.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
