

Special Issue

Trade Policy and Macroeconomic Impacts on Agricultural Sustainability

Message from the Guest Editors

This special issue investigates the nexus of trade and macroeconomic policies relating to agricultural sustainability. Economic policies must be designed to positively impact the globally relevant issues of climate change, water scarcity, food insecurity, poverty alleviation, environmental degradation, and sustainability of resources (water, soil, and nitrogen fertilizer). Sustainability is a particularly crucial factor in policy formulation and analysis while conflicting economic, environmental, and social objectives move toward a resolution. We welcome manuscripts investigating agricultural sustainability as it relates to: the interaction of agricultural trade and environmental policies, the impacts of the liberalization of specific agricultural trade, the environmentally friendly technology transfer in agriculture, free trade agreements, exchange rate changes, and biofuel policies. These policies have important effects on the trade and prices of environmentally sensitive goods. Papers selected for this Special Issue are subject to rigorous peer review and streamlined for rapid, widespread dissemination of the results.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
