The Transition to a Low-Carbon, Smart Mobility in a Sociotechnical Context

Message from the Guest Editor

The net result of the dominance of economic growth based on efficient transport has been high levels of mobility that lead to high carbon mobility. The total dependency of motorized transport on oil creates significant implications for emissions and in particular CO₂. Transport accounts for about 24 per cent of global CO₂ emissions, and over than 61 per cent of oil consumption. Car-based mobility is dominant, creating a specific sociotechnical context. Cities are facing long-term challenges in the domains of mobility and its links to urban form revolving around the issues of congestion, accessibility, and sustainability. The basic concept of solutions is based on the framework of avoid–shift–improve directions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
