

Special Issue

Sustainable and Intelligent Transportation System in Tunnel System

Message from the Guest Editors

Within transportation sciences, great emphasis is placed on transport infrastructure itself. Its usage, efficiency, and control over traffic flow could be improved by using technological equipment and advanced systems known as transport telematics or intelligent transportation systems. One of the essential parts of transport infrastructure is tunnels, which are often the key transport route, because of terrain, absence of alternatives, transit in the cities, etc. However, tunnels require more attention from safety, reliability, security, efficiency and sustainability. Due to complexity of tunnels, many technological equipment and implemented systems could be discussed, such as traffic control, usage of variable message signs, ventilation, lighting, positioning methods, detection of traffic or unexpected events, energy consumption, etc. These systems are high cost in terms of operation and maintenance, which is as important as the development of new systems. Thus, research papers, experimental studies, testing results and new approaches in the field of sustainable tunnel systems are welcomed in this Special Issue. Dr. Rastislav Pirník

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
