

Special Issue

Urban Design for Sustainable Built Environment

Message from the Guest Editors

It is widely acknowledged that the quality of the built environment is key for the health and wellbeing of people and that sustainability is instrumental for designing high-quality urban environments in response to societal, environmental, and economic challenges. To tackle these challenges, sustainability scholars recommend strengthening and advancing paradigms such as regenerative sustainability (RS) and sensory sustainability science (SSS). However, how are these sustainability paradigms addressed in urban design by scholars and practitioners? What are the implications for theoretical and applied research, practice, and development? Against this backdrop, the scope of this Special Issue is to scrutinise these questions and highlight the state-of-the-art of empirical research and projects addressing urban design for sustainable urban environments through the lens of the RS and SSS paradigms. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
