

## Special Issue

# Vocational Education and Training for Sustainable Development

### Message from the Guest Editors

Sustainability has been a great concern regarding the world's economic growth given the finite nature of the planet's natural resources that provide the input for modern economies and where the waste output accumulates. It has become clear over the last decades that the world needs to find a way to harmonize ecology with prosperity. The idea of Education for Sustainable Development has recently been at the forefront of the education field, since the world has failed to efficiently tackle the 'high growth–high carbon' trend and the use of natural resources. This failure of today's economies to efficiently address sustainability could be regarded as a failure of the current educational system, which does not sufficiently provide people with innovative ways of thinking in order to become responsible citizens capable of critical thinking and able to seek new business opportunities that will achieve economic well-being while retaining the health of our planet. As a result, a new pedagogy has to be introduced that will provide people with the key competences to address sustainability.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
