New Multidisciplinary Approaches for Reducing Food Waste in Agribusiness Supply Chains

Message from the Guest Editors

It is well known that food waste has huge social, economic, and environmental impacts. Social impacts arise because a significant proportion of the world population suffer from hunger while others waste food. Given the growing importance and the urgency of reducing food waste, we propose another Special Issue in this area, using a multi-disciplinary perspective. There is growing need to increase food availability to feed the world's growing population. The easiest way to improve food availability is by reducing food waste as it will provide a 'win-win' strategy for nutrition security and sustainability, and reduce hunger. We invite contributions involving qualitative, quantitative, mixed, and/or modelling approaches to tackle the food waste problem. We welcome papers that are deemed theoretical, empirical, computational, or model- or application-oriented.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
