

## Special Issue

# Waste Management for Sustainable Development

### Message from the Guest Editor

This Special Issue will cover progress in the areas of waste management design, operation, policy or practice with emphasis on sustainable development. The intention is to promote fundamental and applied research that could be beneficial to waste management researchers, practitioners, or policy makers. Issues that will be covered include waste generation and characterization, collection, cleaner production, waste utilization, life cycle assessment, planning, policy and regulations, innovative technologies, education and training, and system/process optimization. We are soliciting high-quality work in the form of original research articles, best practices, and critical reviews. Case studies will be considered but should extend the discussion beyond the locality of the study. All articles should address waste management problems and solutions that are of general interest to readers with emphasis on sustainability.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
