

Special Issue

Water Reuse for Sustainable Agriculture and Environment

Message from the Guest Editors

Water reuse is becoming inevitable worldwide due to the changing environment (e.g., population growth and climate change). Water reuse is one of the essentials to achieve the Sustainable Development Goals of better managing water to sustain people and the environment through improvements in the sustainable use and development of water resources and wastewater management. Many researchers, organizations, and countries have been striving to make sustainable water reuse possible in a variety of aspects, from economic feasibility to environmental sustainability. Nevertheless, global communities are still supposed to share their experiences with solutions, based on the different social and environmental gradients, in order to provide better strategies for sustainable water reuse. This Special Issue is therefore being prepared to share valuable experiences and research. Among other sectors, agriculture and its associated environment are the primary interests of this Special Issue, since agriculture is the single largest consumer of fresh water. Assoc. Prof. Dr. Taeil Jang

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
