Symmetric/Asymmetric Design in Microwave Communication Systems & Embedded Systems for Emerging Wireless Technologies

Guest Editors:

Prof. Dr. Jamal Zbitou

Laboratory of Technology of Information and Communication, National School of Applied Sciences ENSA of Tangier, Abdelmalek Essaadi University, Tetouan, Morocco

Dr. Aziz Oukaira

Department of Computer Engineering, Université du Québec en Outaouais, Gatineau, QC J8X 3X7, Canada

Deadline for manuscript submissions:

31 May 2024

Message from the Guest Editors

Dear Colleagues,

Symmetric and asymmetric designs are fundamental concepts in microwave communication systems and embedded systems, especially when it comes to accommodating emerging wireless technologies like 5G, IoT (Internet of Things), 6G, and beyond. These concepts play a critical role in optimizing the performance, functionality, and efficiency of these systems. Symmetric design in microwave communication systems and embedded systems for emerging wireless technologies prioritizes balanced components and enhancing signal integrity...

Potential topics include, but are not limited to, the following:

- Passive components (filters, couplers, transitions, waveguides, etc.);
- Active components (amplifiers, mixers, oscillators, etc.);
- RF packaging and package modelling;
- RF MEMS and microsystems;
- Sensors and RFID;
- Embedded systems architecture;
- ETC...

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Multidisciplinary Sciences*) / CiteScore - Q1 (*General Mathematics*); Q1 (*Physics and Astronomy*); Q1 (*Computer Science*)
