Symmetry in Multimedia Security

Guest Editor:

Prof. Dr. Ki-Hyun Jung
Department of Software Convergence, Andong National University, Andong 36729, Republic of Korea

Deadline for manuscript submissions:
closed (31 October 2023)

Message from the Guest Editor

Dear Colleagues,

Multimedia data have dominated the Internet, and various devices are capable of producing and handling multimedia data such as audio, image, and video. Multimedia security is a major concern in the prevention of ownership and copyright problems. Multimedia security methodologies, such as digital watermarking, data encryption/decryption, steganography, data hiding, and blockchain, represent new trends in multimedia security. When considering multimedia security, symmetric and asymmetric concepts are very important to sender and receiver.

Special Issue

Editor-in-Chief

Prof. Dr. Sergei Odintsov

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within SCIE (Web of Science), Scopus, CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.
Journal Rank: JCR - Q2 (Multidisciplinary Sciences) / CiteScore - Q1 (General Mathematics)
