Message from the Guest Editors

Nowadays, embedded systems have become an essential part of modern life. It is predicted that, in the near future, over 90% of computer applications will be embedded systems, and most of them will be small in size, with very low power consumption and high performance. Embedded systems is the keystone for the realization and deployment of a plethora of Internet of Things (IoT) products and applications for both consumer and industrial markets.[...]

Deadline for manuscript submissions:  
15 September 2019
Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (NambuKobayashi-Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named Symmetry and it manifests its fundamental role in nature.
