Advances in Chemical Engineering with Symmetry/Asymmetry: A Focus on Clean Processes and Bio-Waste Valorization

Message from the Guest Editors

This Special Issue invites contributions that highlight symmetry approaches as a tool in chemical engineering, with a particular focus on clean processes and bio-waste valorization. We welcome research that delves into how modeling using symmetry approaches at the micro or macro level can improve efficiency systems, sustainability, and the environmental impact of chemical processes. In this context, this Special Issue aims to foster interdisciplinary collaboration between chemists, engineers, and scientists to advance the field of chemical engineering and promote the development of sustainable and efficient processes.

Guest Editors

Dr. Daniela Zalazar-García

Dr. María Celia Román

Prof. Dr. Angie Lizeth Espinosa Sarmiento

Prof. Dr. Diego M. Yepes Maya

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Editor-in-Chief

Prof. Dr. Sergei Odintsov
