

## Special Issue

# Asymmetry in Biological Homochirality

### Message from the Guest Editor

The formulation of physical (and chemical) theories is greatly influenced by our perception of the space we live in and within which we observe the phenomena to be explained on a scientific basis. The certainty of these perceptions is universally taken for granted, and they may lead to the notion that some features of the description of physical (and chemical) systems are matters of *convention* rather than substance. However, what appears to be a matter of convention sometimes turns out to be a substantive physical assumption. As a result, the “convention” may have important physical (and chemical and biological) consequences.

## About the Journal

### Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within SCIE (Web of Science), Scopus, CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Multidisciplinary Sciences) / CiteScore - Q1  
(General Mathematics)
