

Special Issue

Brain, Behavior and Cognition

Message from the Guest Editor

This forthcoming Special Issue will bring together empirical and review articles that offer new insights into the complex interaction between brain structure and function, cognition and behavior in healthy subjects and patients. Special focus will emphasize the advances relevant to a systems-level understanding of the human brain. Since both functional lateralization and hemispheric balance play a role in healthy behavior and cognition, authors are encouraged to submit papers dealing with neuropsychological, neurophysiological, morphological, and biochemical symmetries/asymmetries potentially relevant to cognition and behavior. The effects of treatments aimed at contrasting the effects of altered symmetries and asymmetries will be considered a useful contribution to the field. Reports of basic, clinical, and methodological research are encouraged.

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.
