

Special Issue

Asymmetrical Network Control for Complex Dynamic Services

Message from the Guest Editors

This Special Issue aims to provide a forum for presentations and discussions on the recent advances in asymmetrical network control and its applications.

This Special Issue covers pure research and applications within novel scopes related to asymmetrical network control. In addition, it deals with network and computer technologies, such as future networks, big data, security, the IoT, cloud computing, and so on. The topics of this Special Issue include but are not limited to:

- Software-defined networking
- Cooperation between cloud and edge computing
- Service awareness
- Cross-layer optimization
- Resource allocation
- Content delivery
- Intelligent control
- Asymmetrical network

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Editor-in-Chief

Prof. Dr. Sergei Odintsov
ICREA, 08010 Barcelona and Institute of Space Sciences (IEEC-CSIC),
C. Can Magrans s/n, 08193 Barcelona, Spain
