

Special Issue

Symmetry in Geometry and Topology: Theory and Application

Message from the Guest Editors

The aim of this Special Issue is to focus on recent developments and achievements in functional analysis such as the topology and symmetry of Banach spaces and their geometry, statistical summability, and statistical approximation, almost summability, fuzzy sequence spaces, matrix summability, compact matrix operators between sequence spaces and infinite systems of differential and integral equations in sequence spaces, and various applications. We cordially invite researchers to submit original research and review articles describing new methods and applications that are directly or indirectly related to summability, function spaces, and sequence spaces. We also welcome research including fixed-point theory, operator theory, approximation theory, and symmetry.

Dr. María del Carmen Listán-García

Guest Editors

Prof. Dr. Mikâil Et

Prof. Dr. Bipan Hazarika

Prof. Dr. Naim L. Braha

Dr. María C. Listán-García

Dr. Pinakadhar Baliarsingh

Deadline for manuscript submissions

closed (31 December 2023)

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Editor-in-Chief

Prof. Dr. Sergei Odintsov
