## Chemistry: Symmetry/Asymmetry— Feature Reviews and Papers

### Message from the Guest Editor

Symmetry and asymmetry are fascinating topics in chemistry. The Special Issue entitled “Chemistry: Symmetry/Asymmetry—Feature Reviews and Papers” covers a wide range of topics related to symmetry or asymmetry in chemistry. Papers submitted to *Symmetry* may include all types of symmetry-related problems in chemistry. All organic chemists, theoretical chemists, and crystal chemists are invited to submit papers focusing on, but not limited to, the following emerging research topics in related areas:

- Chirality;
- Enantiomers;
- Diastereomers;
- Molecular symmetry;
- Stereocenter;
- Homochirality;
- Asymmetric synthesis;
- Optical resolution;
- X-ray crystallography;
- Crystal structures;
- Homochirality in chemistry and biochemistry;
- Symmetry and spectroscopy;
- Symmetry and isomerism;
- Homochirality in the origin of life;
- Chirogenesis;
- Stereoselective synthesis;
- Chiral ligands.

## About the Journal

### Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within SCIE (Web of Science), Scopus, CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Multidisciplinary Sciences) / CiteScore - Q1  
(General Mathematics)
