Symmetry and Asymmetry Studies on Graph Data Mining

Message from the Guest Editors

Graph data mining has become one of the most popular research topics in the field of data mining, such as graph deep learning and graph neural networks. However, symmetry and/or asymmetry, which are key structural properties in complex graphs, are often ignored by state-of-the-art graph mining studies. Aiming to address this problem, this Special Issue will focus on new theories, approaches, models, as well as applications of graph mining on complex graph data under symmetry and/or asymmetry. Our goal is for this Special Issue to promote new approaches among the graph data mining community.

Guest Editors

Dr. Dongxiao He

School of Computer Science and Technology, Tianjin University, Tianjin 300072, China

Dr. Dong Liu

College of Computer and Information Engineering, Henan Normal University, Xinxiang, China

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Editor-in-Chief

Prof. Dr. Sergei Odintsov
ICREA, 08010 Barcelona and Institute of Space Sciences (IEEC-CSIC),
C. Can Magrans s/n, 08193 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within SCIE (Web of Science), Scopus, CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.
