

Special Issue

Symmetry in Applied Mathematics

Message from the Guest Editors

This Special Issue, "Symmetry in Applied Mathematics" is open for submissions and welcomes papers from a broad interdisciplinary area, since 'applied mathematics' is a specific form of mathematics that involves creating and use of mathematical models in order to map out the mathematical core of a practical problem. There is probably no scientific field in which applied mathematics has not made its necessary presence. On the other hand, symmetry is about identification and use invariants to any of various transformations for any paired dataset and characterizations associated with. Inside applied mathematics, symmetry may work as a powerful tool for problems reduction and solving. Applications include probability theory (all probabilistic reasoning is ultimately based on judgments of symmetry), fractals (geometry), supersymmetry (physics), nanostructures (chemistry), taxonomy (biology), bilateral symmetry (medicine), and the list can go on.

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Editor-in-Chief

Prof. Dr. Sergei Odintsov
