

Special Issue

Symmetry and IoT Intelligence in the Post Pandemic Economy

Message from the Guest Editor

This Special Issue calls attention to the marriage between “symmetry (and asymmetry)” and “IoT intelligence” and boosts the synergy between the two streams. We are soliciting contributions (research and review articles) covering a broad range of topics on symmetry (and asymmetry) and IoT intelligence, including (though not limited to) the following:

- Symmetry and low-cost sensors
- Symmetry and fast data transmissions
- Symmetry and fault-tolerant networks
- Symmetry and data mining, machine learning, and artificial intelligence
- Symmetry and heuristic and metaheuristic
- Symmetry and IoT applications
- Symmetry and asymmetry in intelligent IoT
- Advances in IoT sensor calibration and validation
- Advances in IoT network architecture and load balancing
- Advances in IoT edge computing
- Advances in linking IoT and biology
- Advances in linking IoT and agriculture
- Advances in linking IoT and environment
- Advances in linking IoT and humanity

Guest Editor

Prof. Dr. Peng-Yeng Yin

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Editor-in-Chief

Prof. Dr. Sergei Odintsov
