

Special Issue

Symmetry in Methods of Numerical Analysis and Its Application in Engineering

Message from the Guest Editors

Symmetries have important roles in solving differential equations. The aim of this Special Issue is to introduce recent research results in numerical analysis and its applications in engineering. Papers in all areas of numerical analysis and applications are welcome. More specifically, we welcome papers that concern topics including, but not limited to, the following:

- Ordinary differential equations;
- Partial differential equations;
- Stochastic differential equations;
- Approximation theory;
- Numerical linear algebra;
- Numerical integral equations;
- Numerical problems in dynamical systems;
- Applications to the sciences (computational physics, computational statistics, computational chemistry, computational engineering, etc.).

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Editor-in-Chief

Prof. Dr. Sergei Odintsov

2. Institute of Space Sciences (IEEC-CSIC), C. Can Magrans s/n, 08193 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within SCIE (Web of Science), Scopus, CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Multidisciplinary Sciences) / CiteScore - Q1 (General Mathematics)
