

Special Issue

Symmetry in Glass Systems: Nucleation, Mechanics, and Properties

Message from the Guest Editor

In acknowledgment of the significance of this Special Issue, I would like to thank *Symmetry* and the MDPI publishing group for facilitating this significant literature search on behalf of the entire scientific community. Parallel to the development of technology and industry, there is absolutely no doubt that many materials of the forthcoming generation have found their way into various applications today. This Special Issue aims to contribute to the scientific community by collating discussions of glass materials that can be recommended for use in nuclear fields, nuclear source transportation, nuclear waste control, patient monitoring, and all other industrial and medical arenas by focusing and tailoring on their symmetry to various properties of multifunctional glasses. I look forward to receiving your support and contributions to our Special Issue, entitled "Symmetry in Glass Systems: Nucleation, Mechanics, and Properties." Please note that all submitted papers must be within the general scope of the *Symmetry* journal. Dr. Hüseyin Ozan Tekin

About the Journal

Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

Editor-in-Chief
