

# Special Issue

## Elementary Fixed Point Theory and Common Fixed Points

### Message from the Guest Editors

In this Special Issue, we solicit contributions dealing with fixed-point theorems from a general point of view regarding original concepts or ideas into recent advances of this theory, avoiding any trivial extension of results already consolidated, possibly accompanied by concrete examples. We recommend to the authors to consider in the theorems symmetric inequalities or symmetric conditions with respect to the metric (or hyper-metric if multifunctions are involved) used, i.e., anyone can obtain a dual result by considering dual definitions based simply on the change of variables, inequality sign, etc.

## About the Journal

### Message from the Editor-in-Chief

Symmetry is ultimately the most important concept in natural sciences. It is not surprising then that very basic and fundamental research achievements are related to symmetry. For instance, the Nobel Prize in Physics 1979 (Glashow, Salam, Weinberg) was received for a unified symmetry description of electromagnetic and weak interactions, while the Nobel Prize in Physics 2008 (Nambu, Kobayashi, Maskawa) was received for the discovery of the mechanism of spontaneous breaking of symmetry, including CP symmetry. Our journal is named *Symmetry* and it manifests its fundamental role in nature.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within SCIE (Web of Science), Scopus, CAPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Multidisciplinary Sciences) / CiteScore - Q1 (General Mathematics)
