

## Special Issue

# Sustainable Supply Chain Management in a Global Context

### Message from the Guest Editors

This Special Issue aims to shed light on sustainable practices, strategies, and technologies that can improve supply chains' performance in terms of the environment, society, and economy across various organisational and geographic contexts. We welcome articles that, among other things, look at how different supply chain participants are connected to one another, how 'circular economy' principles are being implemented, how renewable energy sources are being integrated, how carbon footprints are being reduced, how fair trade is being promoted, how ethical sourcing and labour legislation are being put into practise, etc. There are several subthemes that can be taken into consideration under the theme of "Sustainable Supply Chain Management in a Global Context." Potential topics include:

- Circular Economy and Closed-Loop Supply Chains
- Green Logistics and Transportation

## About the Journal

### Message from the Editor-in-Chief

*Systems* is a leading venue for the quick and global dissemination of results of cutting-edge research in various areas of systems science and systems-related fields. An increasing number of researchers are realizing the enormous potential of systems thinking in managing the many unprecedented and complex issues in all areas of need. The *Systems* journal provides a home of exceptional quality for the manuscripts of these researchers who often find it difficult to publish their work in conventional discipline focused journals.
