Business Model Innovation in the Digital Era

Message from the Guest Editors

A value system refers to a network of activities, resources, and partners that enable a business to create and deliver value to its stakeholders. Indeed, business models in the digital age operate within a network of mutually dependent and constantly evolving components. Understanding their interrelationships is crucial for fostering innovation and resilience in today's dynamic business environment. It allows companies to view their operations holistically, optimize interactions within the broader ecosystem using digital technologies, navigate platforms' complexity, and adapt to disruptive changes. Furthermore, it necessitates the development of new metrics to assess the performance and sustainability of these dynamic systems. This Special Issue seeks original contributions that emphasize the interconnected nature of modern business models as complex systems, advancing our understanding of how holistic, systems-based approaches can drive innovation, resilience, and sustainability in an increasingly digital world. We welcome various research approaches, including theoretical frameworks, in-depth case studies, empirical research, and comparative studies.

About the Journal

Message from the Editor-in-Chief

Systems is a leading venue for the quick and global dissemination of results of cutting-edge research in various areas of systems science and systems-related fields. An increasing number of researchers are realizing the enormous potential of systems thinking in managing the many unprecedented and complex issues in all areas of need. The *Systems* journal provides a home of exceptional quality for the manuscripts of these researchers who often find it difficult to publish their work in conventional discipline focused journals.
