Special Issue

Circular Economy for Food Systemic Design

Message from the Guest Editors

The transition towards a circular economy in food systems is crucial for addressing sustainability challenges, reducing waste, and optimizing resource utilization. A systems-based approach to circular food design integrates network dynamics, complex adaptive systems, and decision-making frameworks to promote resilience and efficiency. By leveraging systematic thinking, digital innovations, and governance frameworks, circular food systems can enhance environmental, economic, and social sustainability while addressing interdependencies within food supply networks. Recent advancements in digital transformation and emerging technologies have further accelerated the shift towards circularity in food systems. Blockchain technology, in particular, plays a vital role in improving traceability, transparency, and trust in circular food supply chains. This Special Issue aims to explore interdisciplinary and systems-oriented approaches that support the development of circular food systems. We look forward to receiving your contributions to this Special Issue and advancing knowledge on circular economy applications in food system designs through a systems-based approach.

About the Journal

Message from the Editor-in-Chief

Systems is a leading venue for the quick and global dissemination of results of cutting-edge research in various areas of systems science and systems-related fields. An increasing number of researchers are realizing the enormous potential of systems thinking in managing the many unprecedented and complex issues in all areas of need. The *Systems* journal provides a home of exceptional quality for the manuscripts of these researchers who often find it difficult to publish their work in conventional discipline focused journals.

Editor-in-Chief

Prof. Dr. Ben Clegg Operations & Service Management Department, Aston Business School, Aston University, Birmingham B47ET, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), Ei Compendex, dblp, and other databases.

Journal Rank:

JCR - Q1 (Social Sciences, Interdisciplinary) / CiteScore - Q2 (Modeling and Simulation)
