

Special Issue

From Assessment to Action: Enhancing Supply Chain Resilience in Global Networks

Message from the Guest Editors

In the contemporary interconnected landscape, supply chains face varied challenges from natural disasters, geopolitical tensions, pandemics, and cyber-attacks. These disruptions underscore the need for resilient supply chains capable of enduring shocks while also adapting and recovering rapidly. Researchers are urged to explore different subjects (e.g., the creation of quantitative models to evaluate resilience; the incorporation of technological advancements, such as AI, IoT, and blockchain, in assessment methods; and the advancement of risk management frameworks designed specifically for contemporary supply chains). Furthermore, the Call for Papers extends to refining and advancing qualitative models explicitly tailored for contemporary supply chains. These frameworks, designed to navigate the complexities of modern business landscapes, should encapsulate multifaceted risks, ranging from geopolitical shifts to technological dependencies. About the Journal

Message from the Editor-in-Chief

Systems is a leading venue for the quick and global dissemination of results of cutting-edge research in various areas of systems science and systems-related fields. An increasing number of researchers are realizing the enormous potential of systems thinking in managing the many unprecedented and complex issues in all areas of need. The *Systems* journal provides a home of exceptional quality for the manuscripts of these researchers who often find it difficult to publish their work in conventional discipline focused journals.
