

Special Issue

Strategic Management Towards Organisational Resilience

Message from the Guest Editor

In the context of unprecedented uncertainty caused by multicrisis, organisations must demonstrate the ability to survive and thrive for sustainable growth. This requires a holistic strategic management approach and advanced, future-focused cognition. The links between strategic management and resilience—strategic, operational, and organisational resilience, dynamic capabilities, ambidexterity, and multidexterity—are limited. More literature on leadership for organisational resilience, organisational resilience culture, business model innovations for delivering and enhancing organisational resilience, identifying factors leading to higher levels of organisational resilience, and measurement of resilience outcomes is needed. This special issue explores varied perspectives on organisational resilience, inviting scholars to share findings and establish new directions. Researchers are encouraged to submit conceptual and empirical articles on resilience measurement, strategic management as an enabler, leadership, resilience culture, business models, resilience capacity, and sustainable development as a resilience driver.

About the Journal

Message from the Editor-in-Chief

Systems is a leading venue for the quick and global dissemination of results of cutting-edge research in various areas of systems science and systems-related fields. An increasing number of researchers are realizing the enormous potential of systems thinking in managing the many unprecedented and complex issues in all areas of need. The *Systems* journal provides a home of exceptional quality for the manuscripts of these researchers who often find it difficult to publish their work in conventional discipline focused journals.
