

Special Issue

Digital Innovation and Business Model Transformation in Complex Systems

Message from the Guest Editor

Digital innovation is transforming organizations and societies, compelling firms to rethink their business models, structures, and value creation within increasingly complex systems. This Special Issue provides a multidisciplinary forum to examine how digital innovation drives business model transformation and systemic change across organizational, industrial, and societal contexts. We invite contributions that adopt a **systems perspective**, integrating technological, strategic, organizational, and institutional dimensions. Topics include digital transformation, business model innovation, platform and **coopetition ecosystems**, value co-creation, service systems, organizational resilience, sustainable growth, and the governance of complex socio-technical systems. Empirical, theoretical, and methodological studies, as well as cross-disciplinary approaches, are especially welcome. By connecting diverse perspectives, this Special Issue aims to advance understanding of how digital innovation enables adaptive, resilient, and competitive organizations, contributing to sustainable economic and social development.

About the Journal

Message from the Editor-in-Chief

Systems is a leading venue for the quick and global dissemination of results of cutting-edge research in various areas of systems science and systems-related fields. An increasing number of researchers are realizing the enormous potential of systems thinking in managing the many unprecedented and complex issues in all areas of need. The *Systems* journal provides a home of exceptional quality for the manuscripts of these researchers who often find it difficult to publish their work in conventional discipline focused journals.
