

## Special Issue

# System Dynamics Models for Public Health and Health Care Policy

### Message from the Guest Editors

This Special Issue will present innovative new work applying system dynamics modeling to a variety of important public health and health care policy topics, such as:

- Health disparities;
- Social determinants of health;
- Community health and well-being;
- Public health and health care in developing nations;
- Health insurance and payment approaches;
- Comparative health systems;
- Mental health issues in adolescents and adults.

We also welcome papers that discuss modeling methodology, such as improved methods for data use and model testing, and their practical application to health-related issues. Papers should communicate clearly and concisely and present strong evidence supporting a model and its findings. Even qualitative mapping studies must rest on some numerical evidence demonstrating the magnitude and history of the problem being addressed. ## About the Journal

### Message from the Editor-in-Chief

*Systems* is a leading venue for the quick and global dissemination of results of cutting-edge research in various areas of systems science and systems-related fields. An increasing number of researchers are realizing the enormous potential of systems thinking in managing the many unprecedented and complex issues in all areas of need. The *Systems* journal provides a home of exceptional quality for the manuscripts of these researchers who often find it difficult to publish their work in conventional discipline focused journals.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SSCI (Web of Science), Ei  
Compendex, dblp, and other databases.

#### Journal Rank:

JCR - Q1 (Social Sciences, Interdisciplinary) / CiteScore -  
Q2 (Modeling and Simulation)
